

Glucose

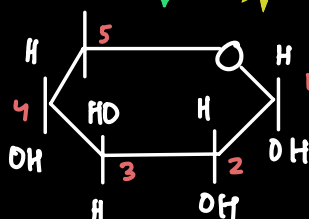

1. Hexokinase

★ Irreversible step

Glucose becomes negatively charged & gets trapped inside cell.

It gets committed !!!

GLUCOSE-6-PO₄

2. Phospho hexose isomerase

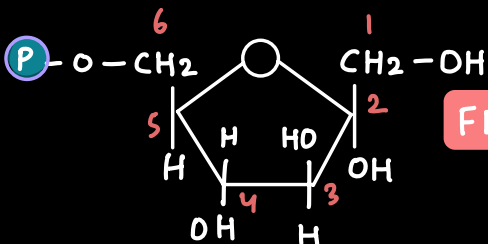

Why Glucose converts into Fructose?

1. Symmetry Problem.

Fructose can be split into 2 mol(s) of 3-C triplets.

2. Handle Problem.

Difficult to attach 2nd PO₄ to Glucose.

FRUCTOSE-6-PO₄

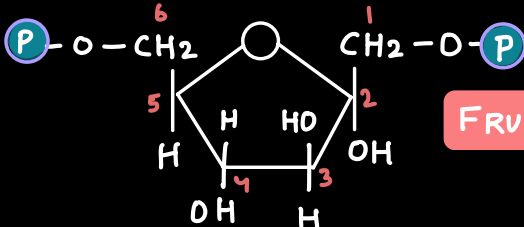

3. Phosphofructo Kinase

★ Irreversible step

Rate limiting step

Slowest, high regul.?

committed step

FRUCTOSE 1,6 bis PO₄

4. Aldolase
